Art Unit: 3726

DETAILED ACTION

Specification

1. Applicant is reminded of the proper content of an abstract of the disclosure.

A patent abstract is a concise statement of the technical disclosure of the patent and should include that which is new in the art to which the invention pertains. If the patent is of a basic nature, the entire technical disclosure may be new in the art, and the abstract should be directed to the entire disclosure. If the patent is in the nature of an improvement in an old apparatus, process, product, or composition, the abstract should include the technical disclosure of the improvement. In certain patents, particularly those for compounds and compositions, wherein the process for making and/or the use thereof are not obvious, the abstract should set forth a process for making and/or use thereof. If the new technical disclosure involves modifications or alternatives, the abstract should mention by way of example the preferred modification or alternative.

The abstract should not refer to purported merits or speculative applications of the invention and should not compare the invention with the prior art.

Where applicable, the abstract should include the following:

- (1) if a machine or apparatus, its organization and operation;
- (2) if an article, its method of making;
- (3) if a chemical compound, its identity and use;
- (4) if a mixture, its ingredients;
- (5) if a process, the steps.

Extensive mechanical and design details of apparatus should not be given.

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Application/Control Number: 10/590,266 Page 3

Art Unit: 3726

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the

subject matter which the applicant regards as his invention.

Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for 4.

failing to particularly point out and distinctly claim the subject matter which applicant regards as

the invention.

The claims are generally narrative and indefinite, failing to conform with current U.S.

practice. They appear to be a literal translation into English from a foreign document and are

replete with grammatical and idiomatic errors.

There are numerous phrases and clauses in the claims that are vague, indefinite, and/or

awkwardly and confusingly worded, and therefore, are not fully understood. The following are

examples:

Claims do not conform to the standard US method format. There is no step.

Claim 1, line 2: amend "whose".

Claim 1, line 9: what is "a state" referring?

Claim 5, line 8: it is unclear whether "a holding part" is referring to "a plurality of

holding parts" or something else.

Claims are ambiguous and competitors would be unable to discern the bounds of the

invention.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the

basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3726

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claims 1 and 4-5, as best understood, are rejected under 35 U.S.C. 102(b) as being anticipated by Visser et al (US 5,842,388).

Re claim 1: Visser discloses that a cylindrical main body (10) comprising a raceway in an inner peripheral surface thereof (30);

a flange (18) provided in an outer peripheral surface on a vehicle inner side of the cylindrical main body (i.e., inside the front quart panel where a wheel is located); and

a cylindrical fitting tolerance part (12) provided further on the vehicle inner side than the flange (i.e., 12 located closer to the inside surface of the front panel than the bottom of 18), wherein

the cylindrical main body is made turning in a state where the flange is held by a holding device (Fig. 5).

Re claim 4: Visser discloses that the flange is held at a plurality of positions in an outer peripheral surface of the flange spaced to one another at circumferentially equal intervals when the flange is held (102 and 104 hold the flange at a plurality of positions in an outer peripheral surface of the flange spaced to one another at circumferentially equal intervals when the flange is held).

Re claim 5: Visser discloses that the flange comprises large-diameter flanges provided with bolt holes (Fig. 2) and small-diameter flanges provided between the large-diameter flanges in the circumferential direction (areas between 80s and 12 and 80s),

a plurality of holding parts (102 and 104) is used when the flange is held (Fig. 5), and

Application/Control Number: 10/590,266

Art Unit: 3726

a holding part (102) comprising a recessed part (where 80s are located) recessed toward an outer-diameter side (corresponding locations of 80) and having a dimension capable of housing the large-diameter flange on an inner-periphery side, is used as at least one of the plurality of holding parts (102 and 10).

Page 5

Allowable Subject Matter

7. Claims 2-3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

- 8. Please provide reference numerals (either in parentheses next to the claimed limitation or in a table format with one column listing the claimed limitation and another column listing corresponding reference numerals in the remark section of the response to the Office Action) to all the claimed limitations as well as support in the disclosure for better clarity (optional). Applicants are duly reminded that a full and proper response to this Office Action that includes any amendment to the claims and specification of the application as originally filed requires that the applicant point out the support for any amendment made to the disclosure, including the claims. See 37 CFR 1.111 and MPEP 2163.06.
- 9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rick K. Chang whose telephone number is (571) 272-4564. The examiner can normally be reached on 5:30 AM to 1:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David P. Bryant can be reached on (571) 272-4526. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
